Start using CowManager. You will not only manage your cows but the total success of your dairy farm!

# CowManager®

## 24/7 In Control Over Your Cows

“With CowManager, early detection of mastitis, fresh cow illnesses and subclinical respiratory infections has been substantial. I am definitely catching the majority of sick cows earlier. In most cases, there is a faster recovery and the cows bounce back sooner.” - **Mike Johnson (USA)**

“We were spending six to seven hours a day heat detecting while milking, instead of 10 minutes a day with CowManager - and now we’re getting it right. With different staff members milking each day, the chances of missing heats or drafting cows not on heat increased dramatically.” - **Brett Membrey (AUS)**

“Since using CowManager, I’ve been able to spend more time on other things. We have a young family and I like to spend my time with them. When I’m not home, I can just look on my phone and I know everything on the farm is going well.” - **Reijer den Hartog (NL)**

The best way to learn more about CowManager is to try it out yourself.
